WRAPPING PROCESS

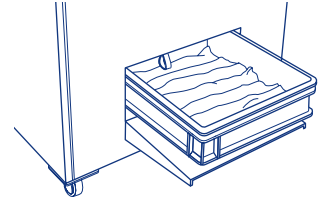

1

The desired cutlery set (max. 4 – 5 pieces) is placed into the feed chute.

2

The TD 800 automatically wraps the cutlery set into a high quality napkin.

3

Afterwards, the finished wrap is sorted into a cutlery bin.

- Clearly arranged operating panel
- Easy handling

- High quality napkin paper
- Customisable printing options
- Min. 6.000 wraps per napkin roll

“Fully automatic cutlery set wrapping into napkin paper – hygienic and without plastic”

Our cutlery wrapping machine hygienically wraps up to 800 sets of cutlery per hour into an optical appealing napkin paper wrap. The desired combination of clean, washed cutlery (max. 4 – 5 pieces) are placed into the feed chute of the cutlery wrapping machine. From here, the full automatic wrapping process of the cutlery set into a napkin begins. The wrap is sealed by means of perforation which allows an easy opening of the wrap without damaging the napkin.

The integrated “Fillomat” distributes the wrapped cutlery sets directly into a cutlery bin. The amount of cutlery sets per box can be individually programmed as desired (between 44 – 66 wraps/box). Once the adjusted amount of cutlery sets have been achieved, the machine will stop while the display panel notifies the operator to replace the cutlery bin. The bin can be easily exchanged.
